

Notes for Candidates of Unit Standard 20046

This course covers the requirements for Unit Standard 20046 Version 5 - Monitor pool water quality and store pool water treatment chemicals.

This is an introduction to pool operations and for swimming and pool operators.

Unit Standard 20046 V5 covers:

- ✓ Compliance requirements for swimming and spa pools as outlined in NZS5826:2010 Pool Water Quality
- ✓ Describing the main components of a public pool
- ✓ Monitoring pool treatment processes and systems
- ✓ Recording of data
- ✓ How to perform water testing procedures
- ✓ Recording and interpreting of test results
- ✓ Identification and reporting of test irregularities
- ✓ Handling and storage of pool water treatment chemicals in accordance with manufactures instructions
- ✓ Obtain a basic understanding of the operation and maintenance of pool treatment systems

The assessment includes:

- A written component, which is mostly short answers, and done at the end of the day.
 - An observation of you working with the pool and chemicals after the course has been held.
 - Your workbook is then submitted to the Facilitator for marking.
 - When marked as complete you will be awarded a certificate and your results recorded on your NZQA Record of Learning.
-
